

ENVIRONMENTAL POLICY

Sustainable Built Environments (SBE) is committed to improving the environmental, social and economic performance of development projects, whilst minimising the environmental impacts of our business operations.

SBE is committed to the following objectives:

To foster the principles of Ecologically Sustainable Development (ESD) which include the precautionary principle and the concept of intergenerational equity, within our organisation, on behalf of our clients and in the wider community.

To actively promote environmental, social and economic sustainability through government bodies, industry, stakeholders and the wider community, in recognition of the ongoing need to move towards an ecologically sustainable future.

To be leaders in environmental and social performance, through innovation, best practice, and continual improvement.

To remain independent in our advice.

To reduce waste and the consumption of natural resources in our operations through an environmentally responsible purchasing program and by reusing and recycling office waste wherever practicable.

To reduce energy consumption in our operations through responsible energy management.

To actively encourage the use of public transport by all employees
